

HortiMaX CX500

The new standard in adaptive greenhouse technology

- A tailor-made, adaptable and affordable solution
- Integrated technology for water, climate and energy-related processes
- Convenient, transparent and flexible
- Modern IT technology, ready for the future

The new standard in adaptive greenhouse technology

Are you a dealer or greenhouse builder and looking for an affordable, flexible, expandable and user-friendly process computer? And should that system be adaptable to the local needs and climate conditions of growers? If so, the HortiMaX CX500 is the best solution for you. It not only optimises the greenhouse climate, but also controls a wide range of processes and systems, such as irrigation, heat buffers or boilers. This controller is suitable for every greenhouse or crop, anywhere in the world, and is easy to upgrade as the grower expands his business. In short, the HortiMaX CX500 will make a great addition to your product range.

Distinctive

The HortiMaX CX500 is the new standard in adaptive greenhouse technology, making it distinctive in the Dutch horticultural sector. Our main goal was to design a system that a dealer or reseller would be able to customise fully independently. As a result of this design process, the HortiMaX 500 offers the following benefits:

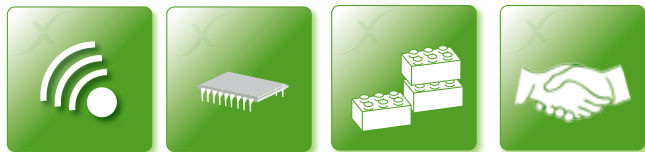

Horti-MaXimum
ease of
configuration

Horti-MaXimum
ease of
installation

Horti-MaXimum
ease of
use

Horti-MaXimum
affordability

Horti-MaXimum
remote
controllable

Horti-MaXimum
scalability

Horti-MaXimum
flexibility

Horti-MaXimum
reliability

Adaptive greenhouse technology

The HortiMaX CX500 can be equipped with a comprehensive range of technologies. Together with the grower, you determine which technology and controls he requires, depending on his needs, crop and climate conditions. This means the grower only pays for the functionality he'll actually use. And if he needs more functionality later, the HortiMaX CX500 can grow along with him. The key benefit

to you as a dealer is that you'll always be able to offer a system that is perfectly suited to the needs of your customer.

HortiMaX CX500 software

Using the HortiMaX CX Assistant software, you can create the ideal system for a grower by simply 'dragging and dropping' the desired control options. This configuration process is easy and minimises the risk of errors being made. This, in turn, keeps installation costs low and results in fewer questions afterwards. You simply determine which technology is required, and add more functionality or control options later as the grower's needs change. The HortiMaX CX500 comes with the Synopta Lite user interface software, which can be fully customised to the user's requirements. Any features that the user doesn't need are hidden. Synopta Lite enables growers to monitor and analyse every stage of their crops' development.

More information?

Are you looking for a top-brand process computer that is affordable and will grow along with the needs of your customers? If so, the HortiMaX CX500 is the solution for you. Please feel free to contact us for more information or a demonstration.
